

MIMIC-III

A Freely Available Critical Care Database

Tom J. Pollard
Jesse Raffa

MIT Laboratory for Computational Physiology,
Institute for Medical Engineering and Science

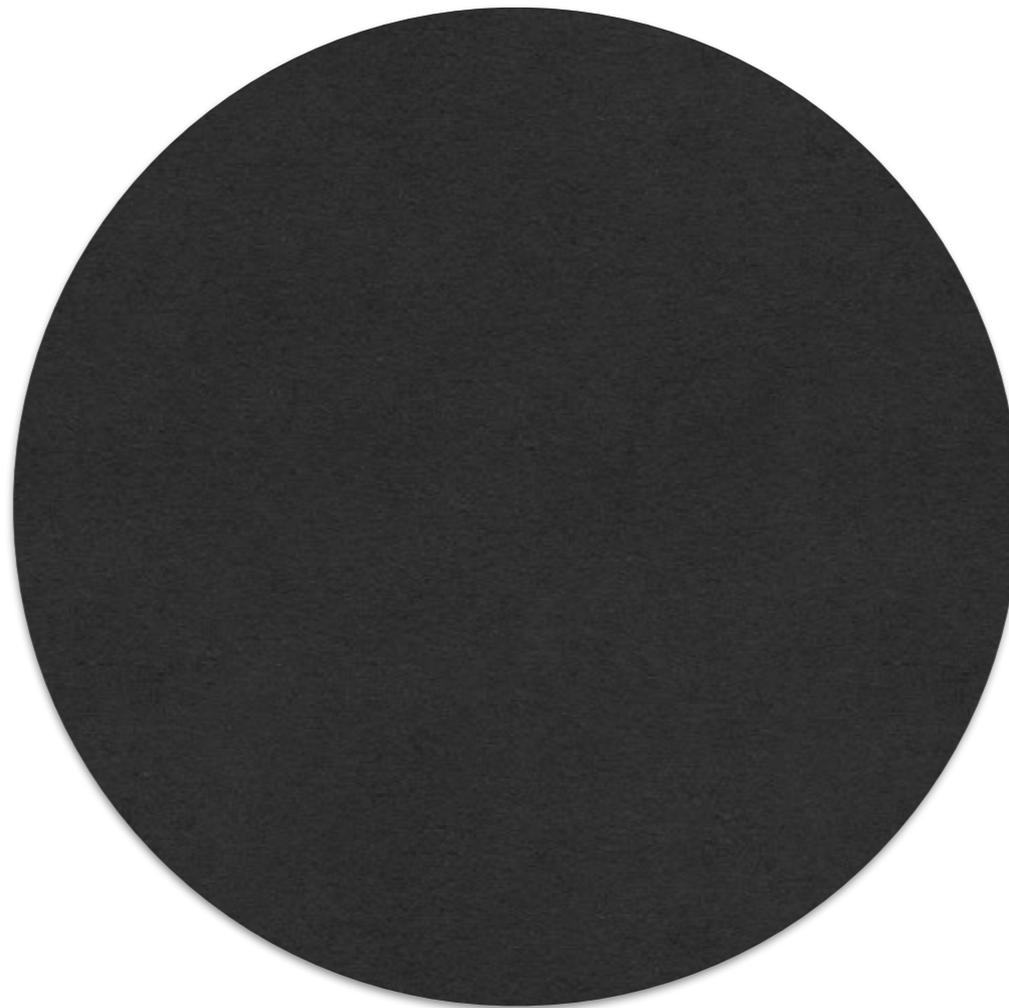

Research opportunity

- Huge volumes of data are captured daily
- *...data that could be used to discover new knowledge for the benefit of patients*

- *but, this data is inaccessible to researchers*

The MIMIC logo is centered in the upper half of the image, enclosed in a white square border. The background of the entire slide is a dimmed photograph of a hospital room with medical equipment and a patient monitor displaying vital signs like heart rate (97) and blood pressure (102/52).

Collaborative research

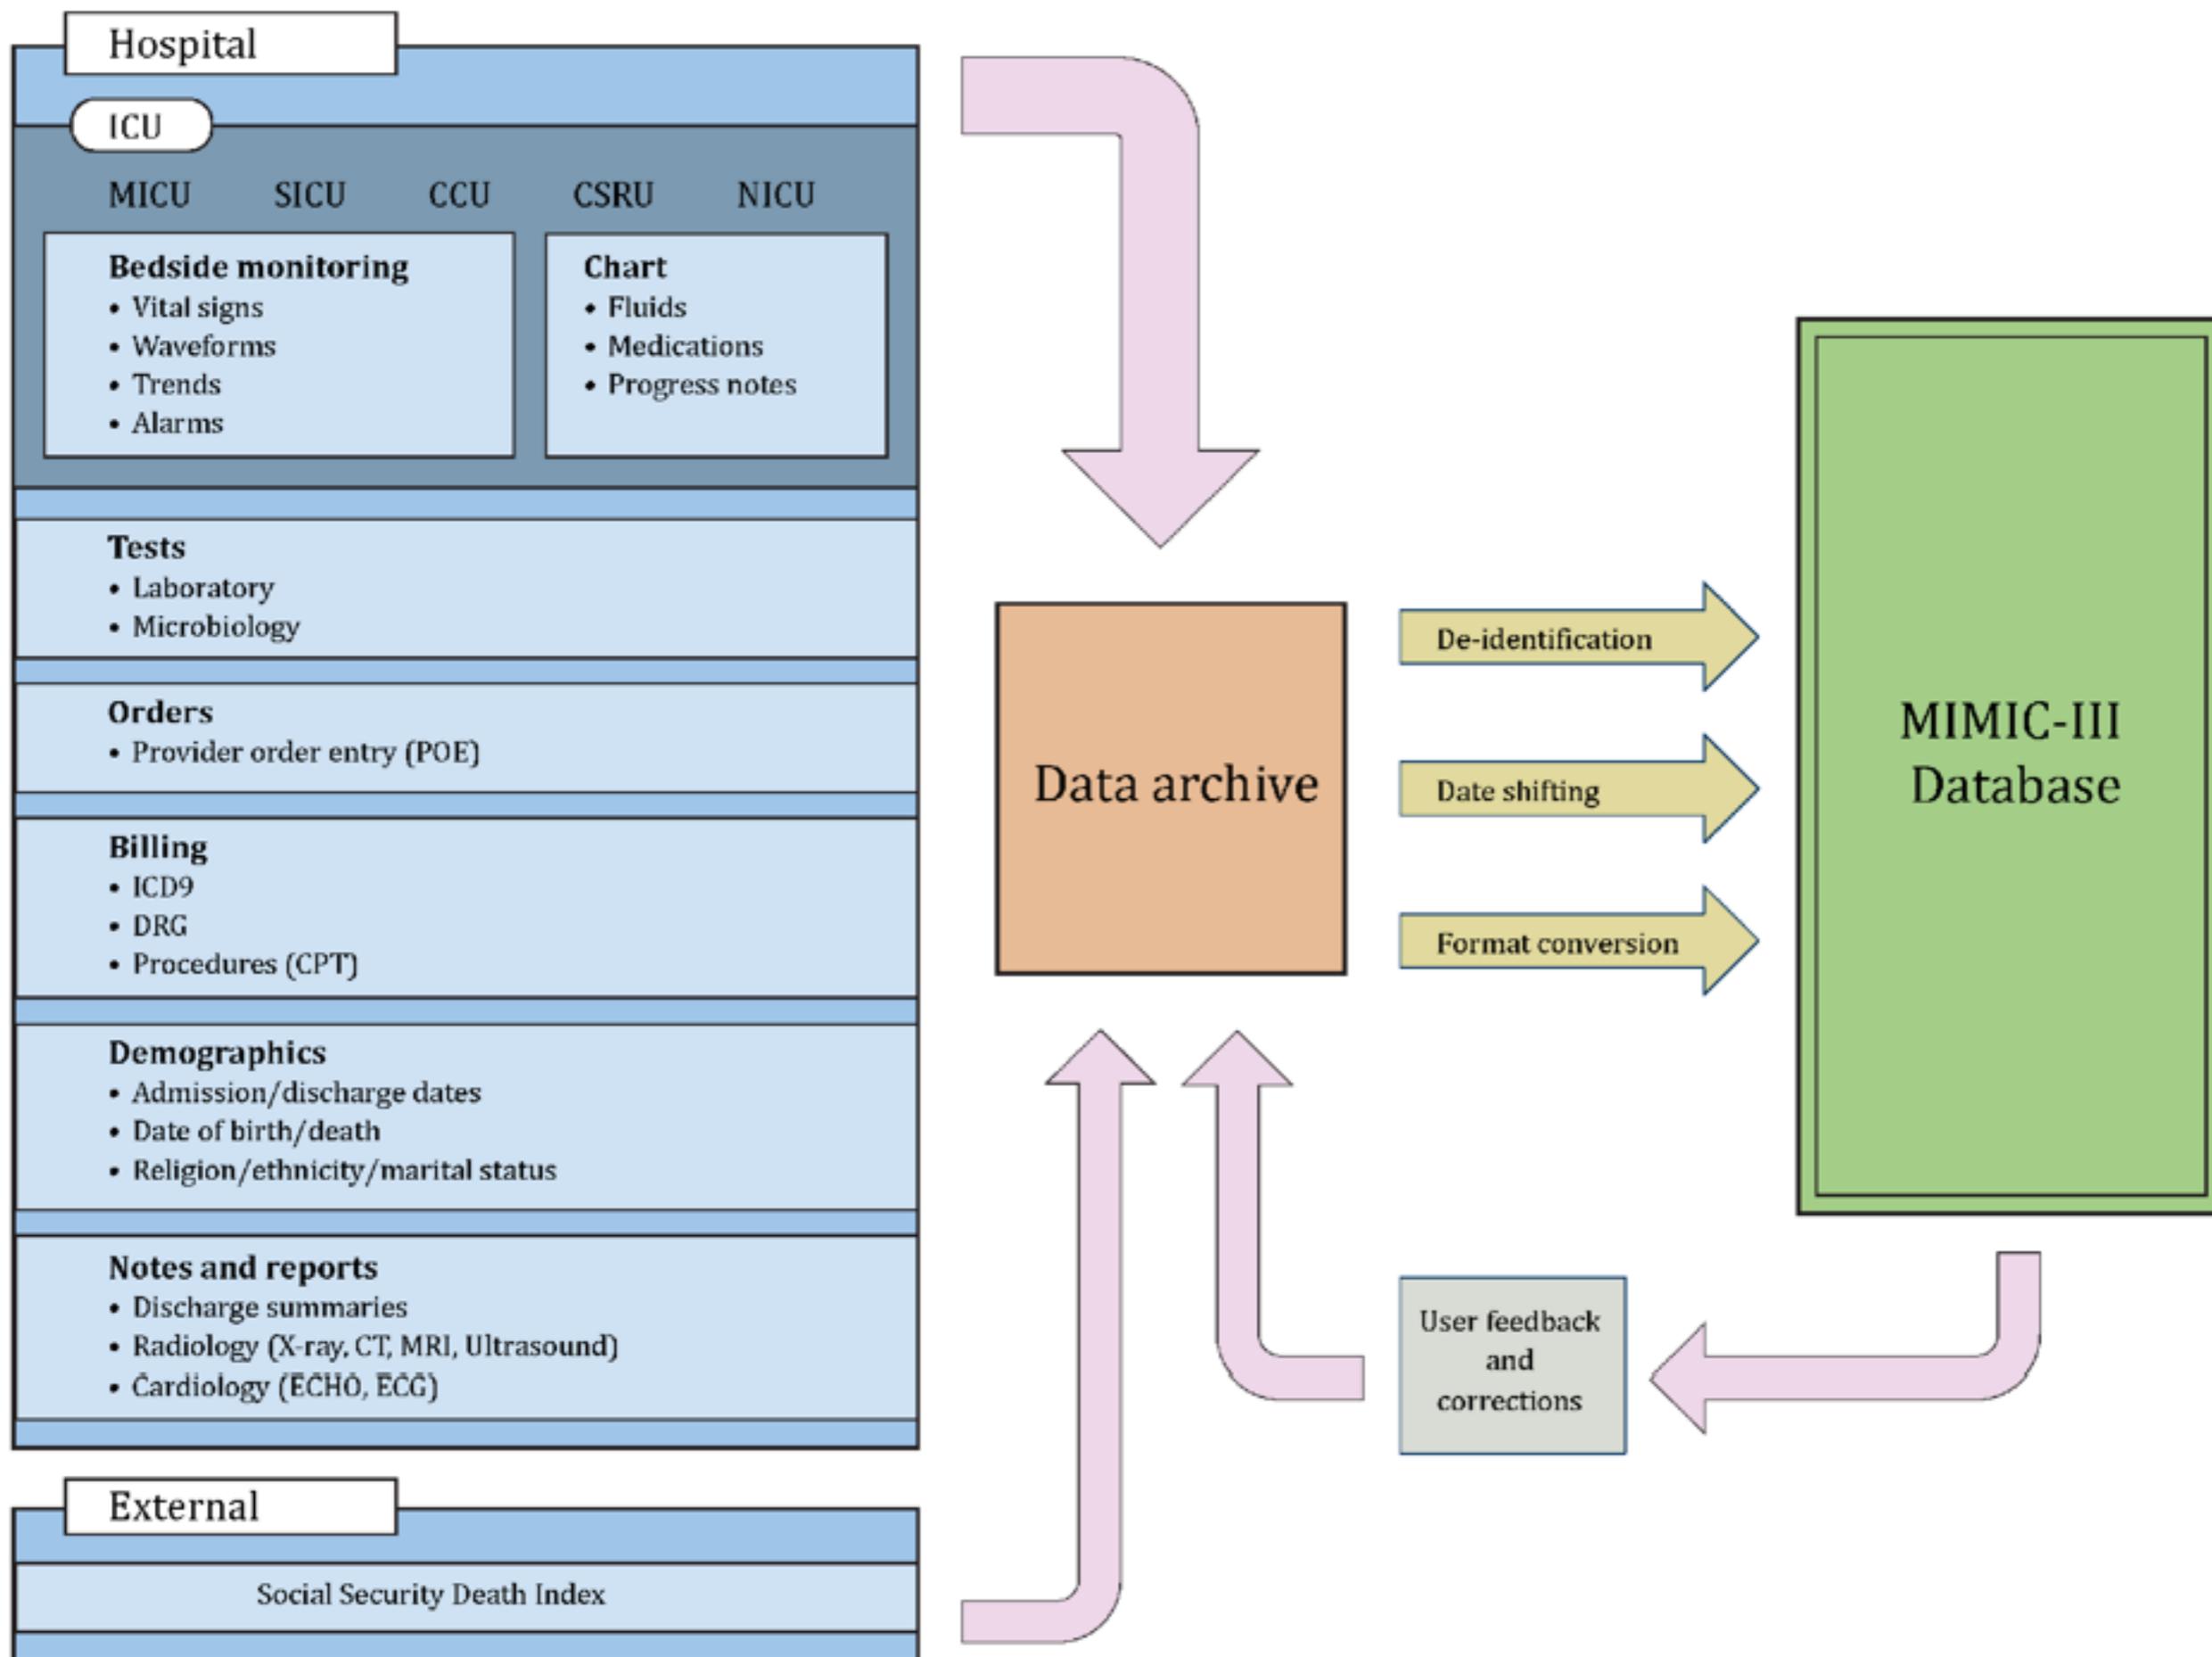

MIMIC is an openly available dataset developed by the MIT Lab for Computational Physiology, comprising deidentified health data associated with ~40,000 critical care patients. It includes demographics, vital signs, laboratory tests, medications, and more.

MIMIC-III

- 2001 - 2012
- Waived consent for data collection
- ~40,000 patients
- Data extracted from digital systems

Code status	Full code						Comfort measures
GCS: Verbal	Oriented		Oriented		Oriented		Confused
GCS: Moto	Obeys commands		Obeys commands		Obeys commands		Confused
GCS: Eye	Spontaneously		Spontaneously		To speech		Confused
Platelet, K/uL	48	53	46		45		Incomprehensible sounds
Creatinine, mg/dL	0.7		0.7		0.8		Flex-withdraws
White blood cell, K/uL	9.1	12.4	16.8		23.2		None
Neutrophil, %	37						
Morphine Sulfate							
Vancomycin (1 dose)							
Piperacillin (1 dose)							
NaCl 0.9%	10.0mL/hour		10.0mL/hour		10.0mL/hour		
Amiodarone			1mg/min	0.5mg/min	0.5mg/min		
Dextrose 5%			50mL/hour	25mL/hour	25mL/hour		

Admission Date: [**2952-11-3**]

Discharge Date: [**2952-11-9**]

Date of Birth: [**2887-7-23**]

Sex: F

Service: MEDICINE

Allergies:

No Known Allergies / Adverse Drug Reactions

Attending: [**First Name3 (LF) 3925**]

Chief Complaint:

Sepsis, respiratory distress

Major Surgical or Invasive Procedure:

None

History of Present Illness:

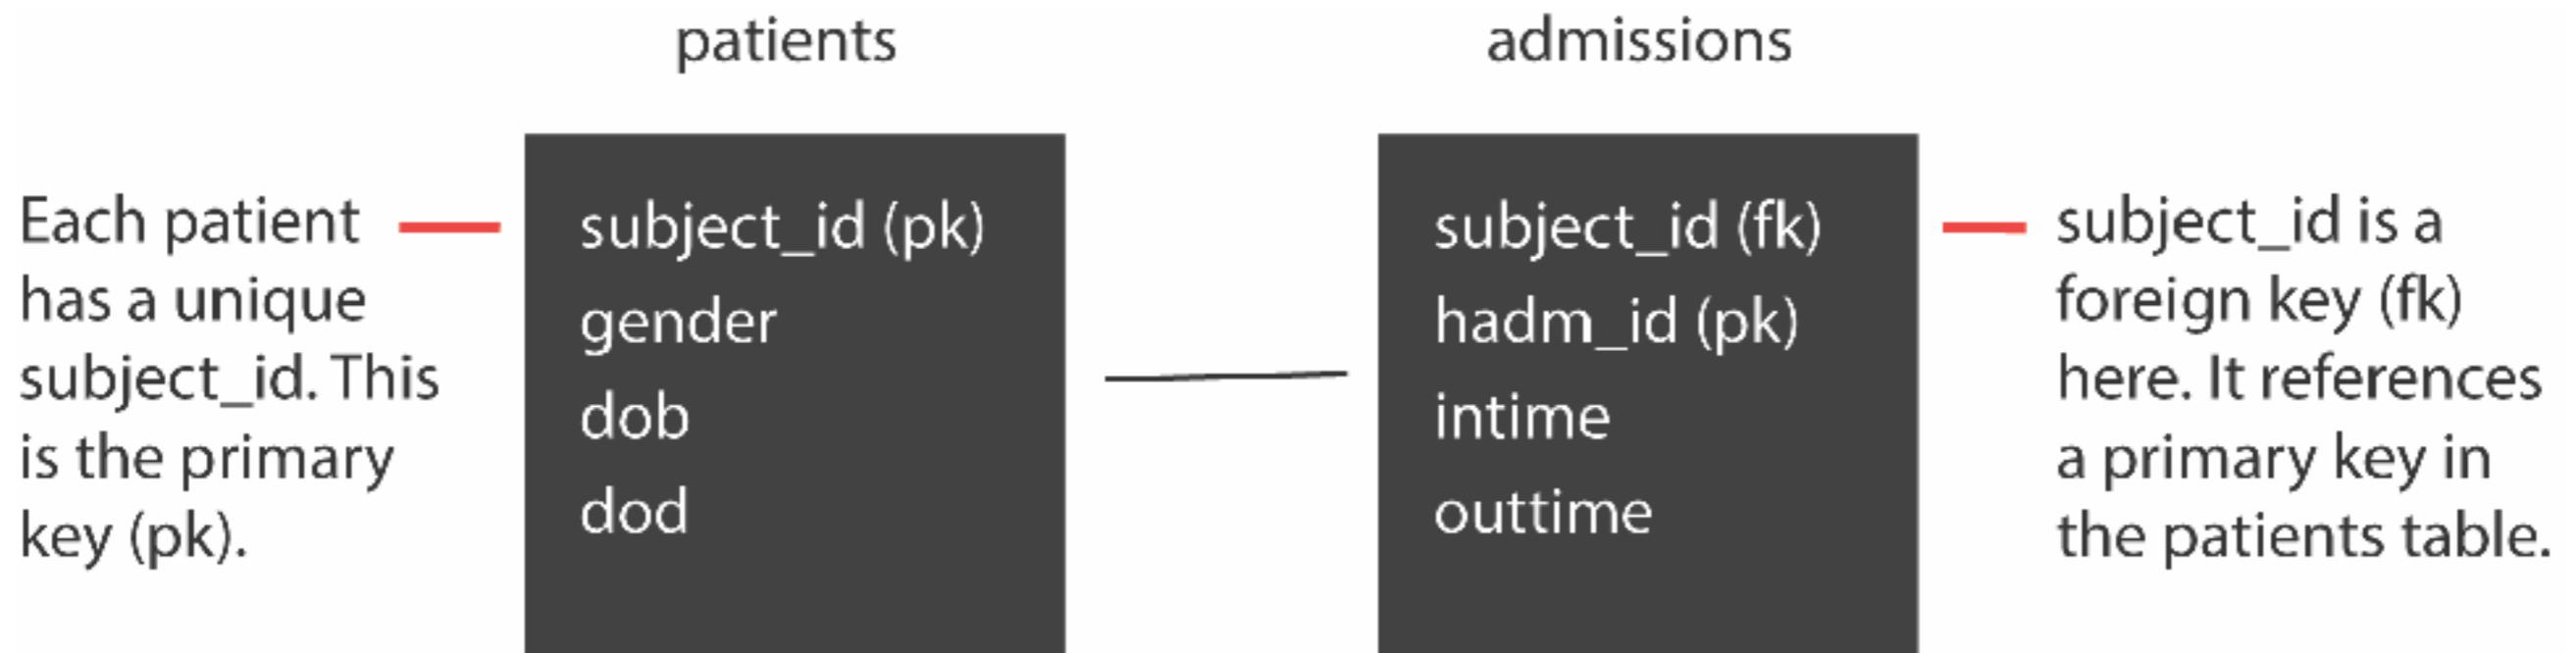

F w/ h/o metastatic breast cancer to breast and lungs currently receiving CMT, brought to the ED by rehab for abnormal labs. She was found to be neutropenic, anemia and thrombocytopenic. At the rehab, vitals were reportedly T 100.4, HR 107, BP 92/42. There is also a concern for possible...

Accessing MIMIC

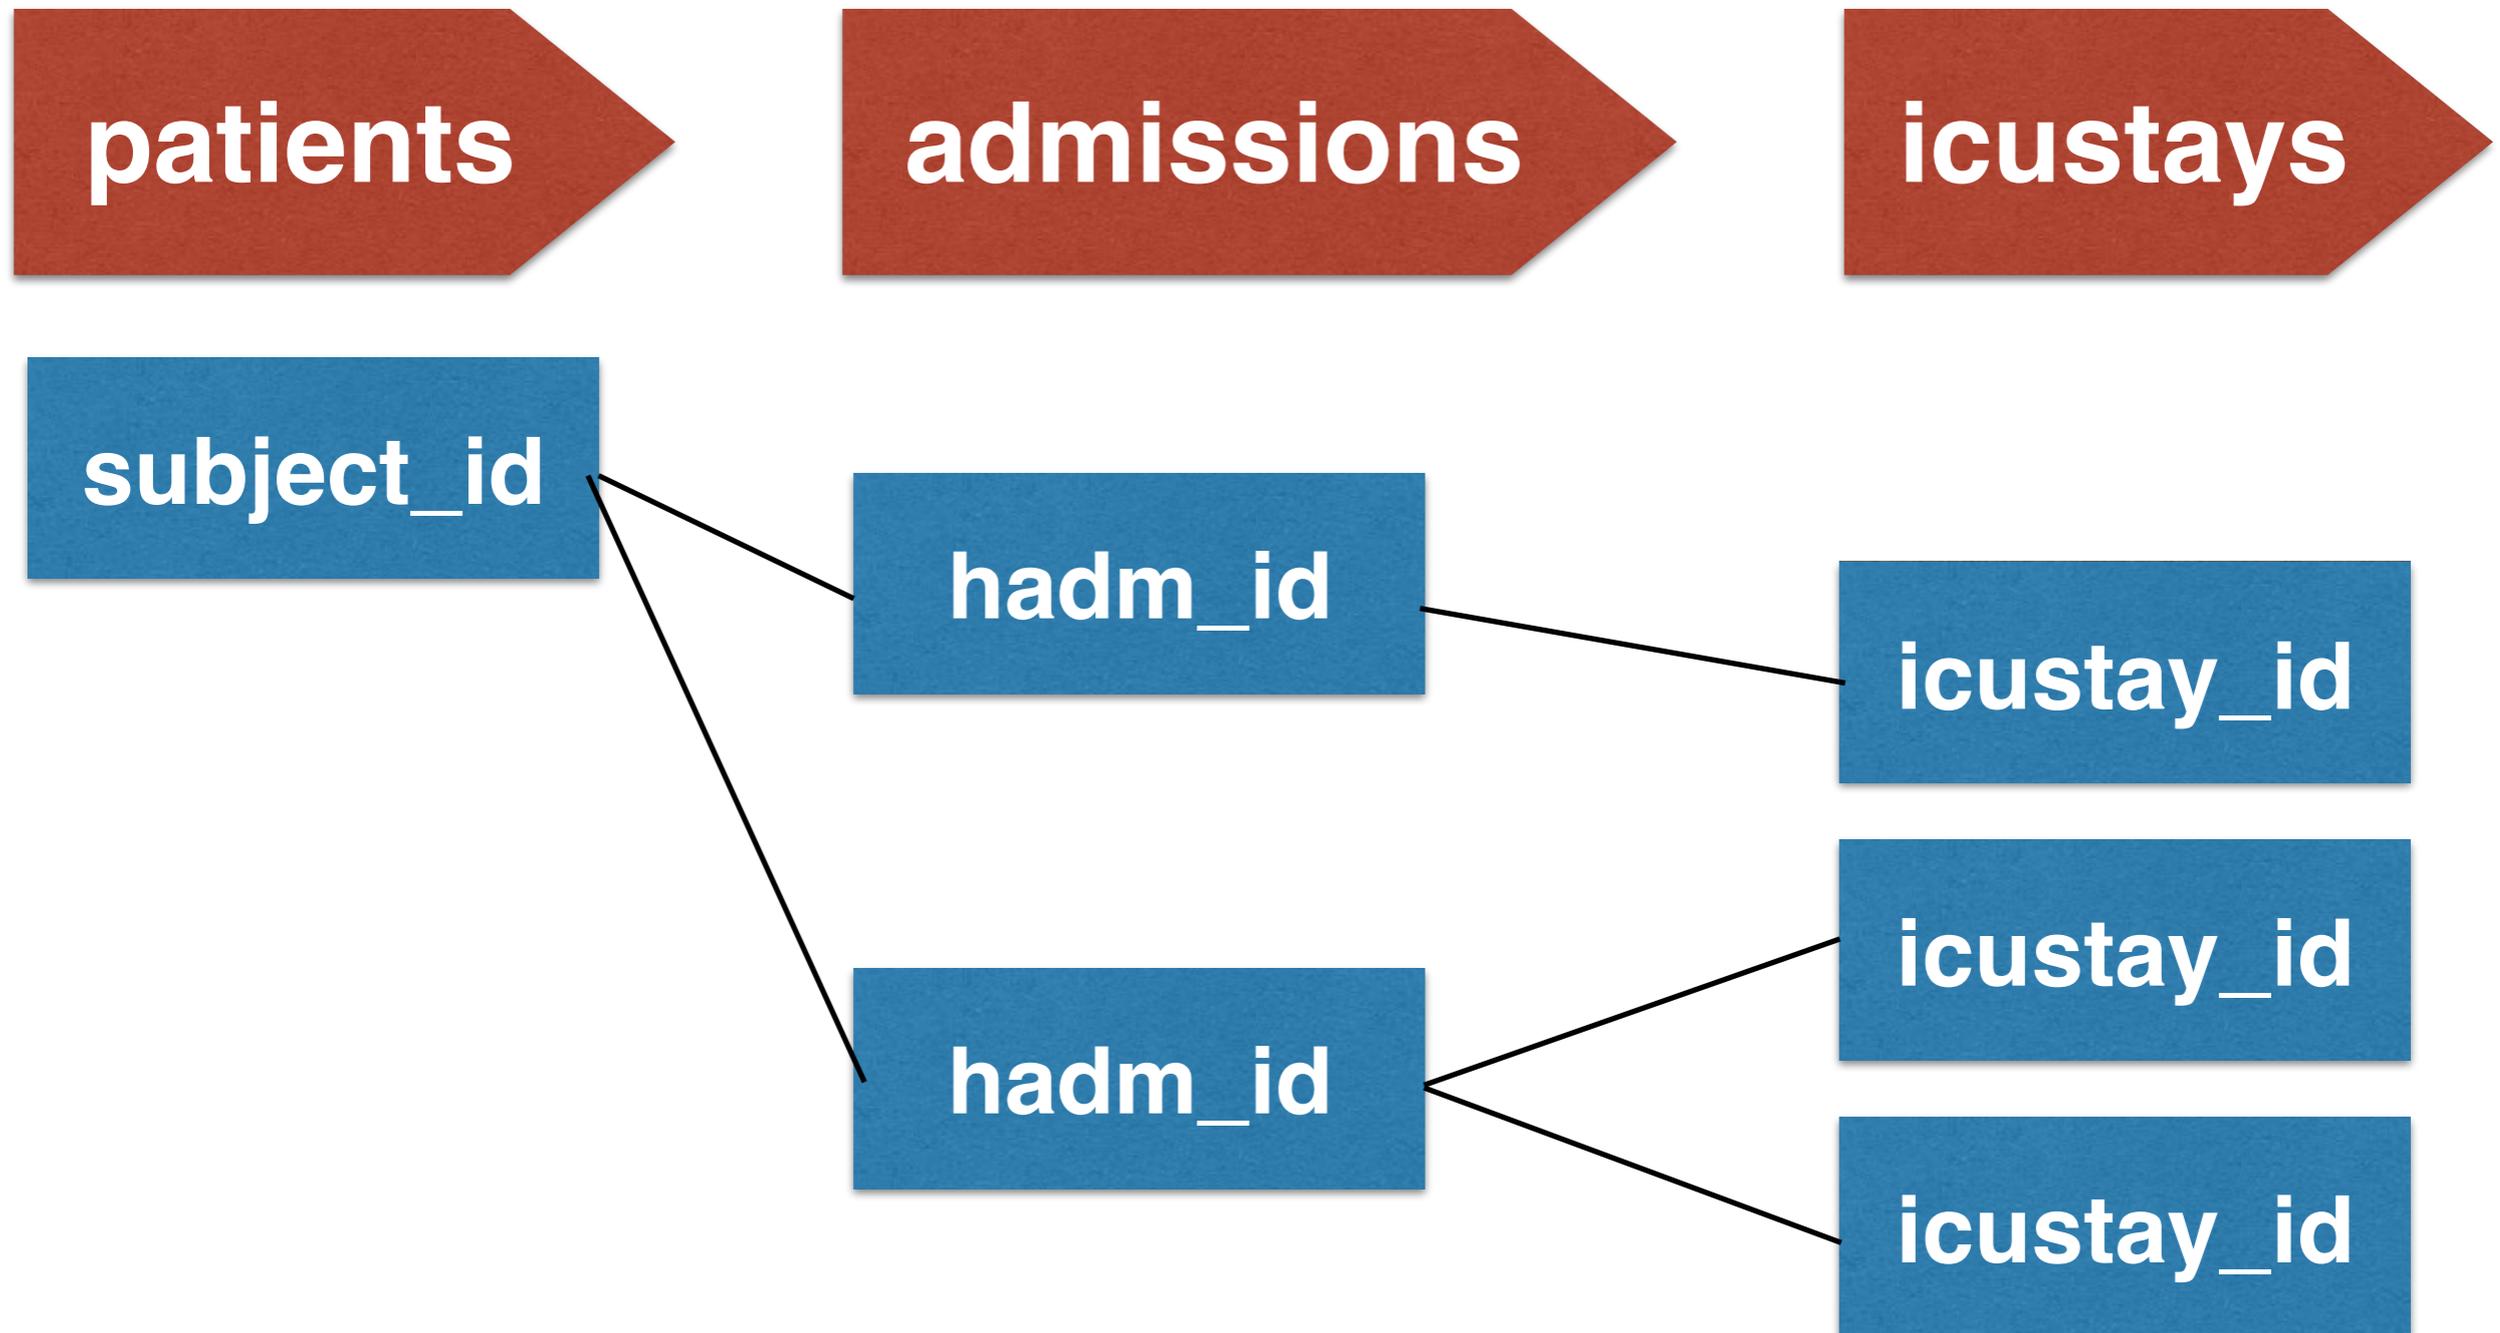

Two key steps to gaining access to MIMIC:

- **complete a online course in protecting human research participants** that covers Health Insurance Portability and Accountability Act (HIPAA) requirements
- **sign a data use agreement**, which outlines appropriate data usage and security standards, and forbids efforts to identify individual patients.

Relational database (a collection of linked spreadsheets)

Patient tracking tables

Events tables

chartevents

Charted observations for a patient

labevents

Lab measurements both within hospital and outpatient clinics

inputevents

Input fluids (e.g. intravenous medications)

**microbiology
events**

Microbiology measurements and sensitivities

noteevents

Deidentified patient notes

Other data tables

diagnoses_icd

Hospital assigned diagnosis codes

procedures_icd

Hospital assigned procedure codes

caregivers

Caregivers who have recorded data

prescriptions

Medications ordered for a patient

Reusable code

The screenshot shows the GitHub interface for the repository MIT-LCP / mimic-code. The repository has 56 unwatchers, 234 stars, and 239 forks. The current view is for the file mimick-code / concepts / sepsis / angus.sql on the master branch. A commit by allstairew] is shown with the message 'formatting, remove schema from query' dated Jan 6. The file size is 3.34 KB and it contains 106 lines of SQL code. The code includes comments about ICD-9 codes for sepsis and a SQL query to create a materialized view named angus_sepsis.

Reproducibility

- We recommend sharing your code
- Include a readme explaining how your code can be used.
- Include a license, so people know their rights to reuse.

BIOMEDIN 215 DATA DRIVEN MEDICINE

With the spread of electronic health records, increasingly large data repositories of clinical and other patient derived data are being built. These databases are large and difficult for any one specialist to analyze. To find the hidden associations within such data, we review methods for large-scale data-mining on electronic medical records, methods in natural language processing and text-mining of medical records, methods for using ontologies for notes.
